# Value Add of Data Curation

---

- Consistency across analyses
- Streamlined data access
- Less time spent preparing data for analysis
- Documentation exists!

# CCAP Curated Datasets

---

- **For service details:** Payment dataset indicates child, household, provider, service date, service type, and type of care for each payment.
- **For parent or child information:** Person dataset contains demographics and can be joined with payment data to understand services by person.
- **For location information:** Address dataset includes full address detail that can be joined to service information.

# EI Curated Datasets

---

- **For child information:** Child dataset contains demographics and most recent address for all children ever engaged with EI
- **For assessment information:** Assessment dataset shows assessment history and results (percentage delay by category) for each child.
- **For participation information:** IFSP dataset includes start and end dates for child's IFSP.
- **For service details:** Services dataset includes details on types of services authorized and dates.
